2017 Consumer Confidence Report

Water System Name:	Speedway Sonoma LLC – C	CA4901080 R	eport Date:	6/5/2018
_	1	•		ral regulations. This report show include earlier monitoring data.
Este informe contiene entienda bien.	información muy importante	e sobre su agua pot	able. Tradú	ízcalo ó hable con alguien que lo
Type of water source(s)	in use: Ground Water - GW			
Name & general location	n of source(s): Hwys 37 & 12	21 Sonoma, CA 954	76	
	Well	ls G9-1, G9-2 and G	9-3	
Drinking Water Source A	Assessment information: N/A	1		
Time and place of regula	arly scheduled board meetings for	or public participation	on: <u>N/A</u>	
For more information, co	ontact: Lino Ramos		Phone: <u>(7</u>	07) 334-9813
	TERMS USE	ED IN THIS REPO	 рт	

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: State Board permission to exceed an MCL or not comply with a treatment technique under certain conditions.

Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (μg/L)

ppt: parts per trillion or nanograms per liter (ng/L)

ppq: parts per quadrillion or picogram per liter (pg/L)

pCi/L: picocuries per liter (a measure of radiation)

SWS CCR Form Revised January 2018 The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial
 processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural
 application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, and 6 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

TABLE 1 – SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA								
Microbiological Contaminants (complete if bacteria detected)	Contaminants of		MCL	MCLG	Typical Source of Bacteria			
Total Coliform Bacteria (state Total Coliform Rule)	(In a mo.) <u>0</u>	0	1 positive monthly sample	0	Naturally present in the environment			
Fecal Coliform or <i>E. coli</i> (state Total Coliform Rule)	(In the year)	0	A routine sample and a repeat sample are total coliform positive, and one of these is also fecal coliform or <i>E. coli</i> positive		Human and animal fecal waste			
E. coli (federal Revised Total Coliform Rule)	(In the year)	0	(a)	0	Human and animal fecal waste			

(a) Routine and repeat samples are total coliform-positive and either is *E. coli*-positive or system fails to take repeat samples following *E. coli*-positive routine sample or system fails to analyze total coliform-positive repeat sample for *E. coli*.

TABLE 2 – SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER								
Lead and Copper (complete if lead or copper detected in the last sample set)	Sample Date	No. of Samples Collected	90 th Percenti le Level Detected	No. Sites Exceeding AL	AL	PHG	No. of Schools Requesting Lead Sampling	Typical Source of Contaminant
Lead (ppb)	1/1/2013 12/31/2015	5	0.006	15	15	0.2	0	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppm)	1/1/2013 12/31/2015	5	0.074	1.3	1.3	0.3	Not applicable	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

SWS CCR Form Revised January 2018

	TABLE 3	- SAMPLING	RESULTS FOR	SODIUM A	AND HARDI	NESS
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	5/19/2014	130	N/A	none	none	Salt present in the water and is generally naturally occurring
Hardness (ppm)	5/19/2014	330	N/A	none	none	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring
TABLE 4 – DET	ECTION O	F CONTAMIN	ANTS WITH A	PRIMARY	DRINKING	WATER STANDARD
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
Arsenic (ppb)	5/19/2014	<0.0	N/A	10	N/A	Erosion from natural deposits;
Arsenic (ppb)	5/24/2017	ND	N/A	10	N/A	runoff from orchards; glass and electronic production waste
Antimony (ppb)	5/24/2017	ND	N/A	6	1	Leaching of natural deposits
Barium (ppb)	5/24/2017	280	N/A	1000	2	Leaching of natural deposits
Beryllium (ppb)	5/24/2017	ND	N/A	4	1	Leaching of natural deposits
Cadmium (ppb)	5/24/2017	ND	N/A	5	0.04	Leaching of natural deposits
Chromium (Total) (ppb)	5/24/2017	ND	N/A	0.05	100	Leaching of natural deposits
Nickel (ppb)	5/24/2017	ND	N/A	100	10	Leaching of natural deposits
Mercury (ppb)	5/24/2017	N/D	N/A	2	1	Leaching of natural deposits
Nitrate (ppm)	4/21/2016	0.83	N/A	45	N/A	Erosion of natural deposits
Nitrate (ppm)	5/25/2017	0.98	N/A	45	N/A	
Nitrite (ppm)	5/19/2014	< 0.0	N/A	1	N/A	Runoff and leaching from fertilizer use; leaching from septic tanks and
Nitrite (ppm)	5/24/2017	ND	N/A	1	N/A	sewage; erosion of natural deposits
Dichloromethane (ppb)	5/19/2014	0.79	N/A	5	4	Discharge from pharmaceutical and chemical factories; insecticides
Dichloromethane (ppb)	3/24/2015	< 0.0	N/A	5	4	
Perchlorate (ppb)	12/9/2014	2.5	N/A	6	1	Perchlorate is an inorganic chemical used in a variety of industries. It usually gets into
Perchlorate (ppb)	3/24/2015	<0.0	N/A	6	1	drinking water as a results of environmental contamination from industrial operations that use, store, or dispose of perchlorate and its salts
Toluene (ppb)	3/24/2015	<0.0	N/A	150	150	Discharge from petroleum and chemical factories; underground
Toluene (ppb)	5/24/2017	ND	N/A	150	150	gas tank leaks
Gross Alpha (pCi/L)	9/29/2014	3.09	N/A	15	0	Erosion of natural deposits
Gross Alpha (pCi/L)	6/17/2015	2.46	N/A	15	0	
Haloacetic Acid (HAA5) (ppb)	8/24/2016	8.9	N/A	60	N/A	By-product of chlorination
Total Trihalomethane (ppb)	6/16/2014	50	N/A	80	N/A	By-product of chlorination
Total Trihalomethanes (ppb)	5/24/2017	40	N/A	80	N/A	
TABLE 5 – DETE	CTION OF	CONTAMINA	NTS WITH A S	ECONDAR	<u>Y</u> DRINKIN	G WATER STANDARD
Chemical or Constituent	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant

SWS CCR Form Revised January 2018

TABLE 6 – DETECTION OF UNREGULATED CONTAMINANTS Chemical or Constituent (and reporting units) Chemical or Constituent (and reporting units)							
Iron (ppb)	6/16/2014	580	N/A	300	N/A	Leaching of natural deposits	
Manganese (ppm)	6/16/2014	0.094	N/A	50	N/A		
Manganese (ppm)	5/19/2014	0.25	N/A	50	N/A	Leaching of natural deposits	
Fluoride (ppm)	5/24/2017	0.25	N/A	2	1	additive that promotes strong teeth discharges from fertilizers and aluminum factories	
Fluoride (ppm)	5/19/2014	0.18	N/A	2	1	Erosion of natural deposits; water	

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead-Specific Language for Community Water Systems: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. [INSERT NAME OF UTILITY] is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. [Optional: If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants.] If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4701) or at http://www.epa.gov/lead.

SWS CCR Form Revised January 2018
